

Technical Manual
No. 5-698-3

HEADQUARTERS
DEPARTMENT OF THE ARMY
WASHINGTON, DC, 10 July 2003

| |
|---|
| APPROVED FOR PUBLIC RELEASE: DISTRIBUTION IS UNLIMITED |
|---|

**RELIABILITY PRIMER FOR COMMAND, CONTROL,
COMMUNICATIONS, COMPUTER, INTELLIGENCE, SURVEILLANCE,
AND RECONNAISSANCE (C4ISR) FACILITIES**

CONTENTS

| | Paragraph | Page |
|--|-----------|------|
| CHAPTER 1. INTRODUCTION TO RELIABILITY | | |
| Purpose..... | 1-1 | 1-1 |
| Scope..... | 1-2 | 1-1 |
| References..... | 1-3 | 1-1 |
| Definitions..... | 1-4 | 1-1 |
| Historical perspective..... | 1-5 | 1-1 |
| Importance of reliability..... | 1-6 | 1-1 |
| CHAPTER 2. RELIABILITY AND ITS MATHEMATICAL FOUNDATIONS | | |
| Reliability as an engineering discipline | 2-1 | 2-1 |
| Mathematical foundations: probability and statistics..... | 2-2 | 2-1 |
| Reliability..... | 2-3 | 2-3 |
| Sampling and estimation | 2-4 | 2-4 |
| CHAPTER 3. RELIABILITY PREDICTION | | |
| Introduction to reliability prediction..... | 3-1 | 3-1 |
| Uses of predictions..... | 3-2 | 3-1 |
| The basics..... | 3-3 | 3-2 |
| Prediction method | 3-4 | 3-3 |
| Reliability modeling..... | 3-5 | 3-5 |
| CHAPTER 4. DESIGNING FOR RELIABILITY | | |
| Establish and allocate requirements | 4-1 | 4-1 |
| Develop system reliability model | 4-2 | 4-2 |
| Conduct analyses..... | 4-3 | 4-3 |
| Design for reliability | 4-4 | 4-4 |
| Conduct development testing..... | 4-5 | 4-5 |
| Iterate the design | 4-6 | 4-7 |
| Conduct demonstration tests | 4-7 | 4-7 |
| Design using a team approach | 4-8 | 4-7 |
| CHAPTER 5. PRODUCING RELIABLE SYSTEMS | | |
| Control configuration..... | 5-1 | 5-1 |
| Design processes..... | 5-2 | 5-1 |
| Train personnel | 5-3 | 5-1 |

| | Paragraph | Page |
|---|-----------|-------------------|
| Institute quality control | 5-4 | 5-2 |
| Conduct screening and testing | 5-5 | 5-5 |
| Production readiness | 5-6 | 5-6 |
| CHAPTER 6. RELIABILITY IMPROVEMENT | | |
| Data collection | 6-1 | 6-1 |
| Conduct trending..... | 6-2 | 6-2 |
| Identify needed corrective actions | 6-3 | 6-5 |
| APPENDIX A REFERENCES | | |
| APPENDIX B AVAILABILITY | | |
| Availability as a function of reliability and maintainability | B-1 | B-1 |
| Availability as a function of logistics..... | B-2 | B-2 |
| APPENDIX C EXAMPLES OF RELIABILITY PREDICTION METHODS | | |
| Introduction..... | C-1 | C-1 |
| Failure rate example..... | C-2 | C-1 |
| Similarity analysis..... | C-3 | C-1 |
| Stress-strength interference method..... | C-4 | C-2 |
| Empirical model..... | C-5 | C-3 |
| Failure data analysis..... | C-6 | C-3 |
| GLOSSARY | | GLOSSARY-1 |

LIST OF TABLES

| Number | Title | Page |
|--------|---|------|
| 3-1 | Two empirical models for predicting reliability | 3-4 |
| 4-1 | Typical reliability-related analyses and their purposes | 4-3 |
| 4-2 | Environments to consider in designing for reliability | 4-5 |
| 5-1 | Examples of parameters measured for process control..... | 5-2 |
| 5-2 | Typical control charts..... | 5-3 |
| 5-3 | Normal distribution | 5-4 |
| 5-4 | Measures of process capability | 5-5 |
| 5-5 | Some of the factors affecting production readiness | 5-6 |
| 6-1 | Manufacturer's use of operational data | 6-1 |
| 6-2 | User's use of operational data..... | 6-1 |
| 6-3 | Reasons why system reliability degrades over time..... | 6-2 |
| 6-4 | Failure data for example | 6-3 |
| 6-5 | Table of calculated values of U for example | 6-4 |
| 6-6 | Three possible signs of a problem when no points are outside of the upper control limit | 6-5 |
| 6-7 | Causes of reliability degradation and potential corrective actions..... | 6-6 |

LIST OF FIGURES

| <i>Number</i> | <i>Title</i> | <i>Page</i> |
|---------------|--|-------------|
| 2-1 | Graph of the normal or gaussian probability density function | 2-3 |
| 3-1 | The area of interference in the stress-strength interference method is the probability of failure (the unreliability) | 3-4 |
| 3-2 | The relationship of the average cumulative failure rate and the actual hazard function for a part..... | 3-5 |
| 3-3 | The reliability of a system when all the elements in the system are in series is the product of the individual reliabilities | 3-5 |
| 3-4 | In an active parallel configuration, the system reliability is calculated by multiplying the unreliability of the elements and subtracting the product from 1 | 3-6 |
| 3-5 | Calculating the reliability of a parallel configuration with perfect switching, unpowered standby elements, and constant hazard function for each parallel element..... | 3-6 |
| 3-6 | Calculating the reliability of k of N parallel elements of equal reliability | 3-7 |
| 3-7 | Calculating the reliability of a combined configuration | 3-7 |
| 4-1 | Example of a functional block diagram..... | 4-2 |
| 4-2 | An example of how lower-level RBDs are used to assesses the reliabilities of assemblies. The resulting assembly reliabilities are used in an RBD of a subsystem made up of the assemblies. This process can be repeated until the system reliability can be assessed | 4-3 |
| 6-1 | Equation for U and plot of U values at 90% confidence for example..... | 6-4 |
